## Beano – Product Information Sheet

### Description

A mixture of Oil Seed Rape and pulses offering a cost effective alternative to Hipro Soya.

### Nutritional Benefit

Oil Seed Rape and small grain legumes when combined offer a favourable alternative to Hipro Soya. During the production of Beano careful process control procedures ensure that it is steam pressure cooked which limits protein damage whilst maximising the reduction in anti-nutritional factors. They are then cooled and ground before being stored.

### Features

- Home-grown protein source
- Reduction in the use of Hipro Soya
- Enables GMO-free feeding
- High energy supply
- High supply of unsaturated fatty acids

### Physical Characteristics / Appearance:

A light brown free flowing meal. Grist size suitable for 3mm pellet production.

### Typical Analysis (DM Basis)

Dry Matter	Crude Protein	Oil A	Crude Fibre
87 – 89 %	20 – 22 %	20 – 22 %	7 – 8 %

To benefit from the above response the overall diet needs to be balanced nutritionally, so that no dietary or welfare components are limiting the overall performance of the animal.
